Three Major Trends in Population

1. Nebraska’s population is becoming more and more concentrated in its most populous counties.

2. The state’s population is getting older and will continue to age.

3. The state’s population is becoming more racially and ethnically diverse.
State Population Summary

• In 2016, Nebraska’s estimated population was 1,907,116.
  – Record high; first time above the 1.9 million mark
  – Up 4.4% since 2010 (ranks 24th highest)
  – Compares to 4.7% national growth rate

• In 2010, Nebraska had a population count of 1,826,341 persons, an increase of 115,076 or 6.7% from the 2000 count of 1,711,265.
  – Nebraska ranked 30th highest in percentage change in population (an increase from 37th highest in 1990s).

• Nebraska’s growth rate of 6.7% in the 2000s was not as strong as the 8.4% rise seen in the 1990s.
  – However, it did exceed the average decade growth rate between 1950 and 2000 (5.3%).
  – The growth rate in the 1990s was the highest since the 1910s.
