LOCAL ECONOMIC DEVELOPMENT STRATEGIC PLANNING:
A PROPOSAL TO DEVELOP COMMUNITY SELF-HELP TRAINING MATERIALS

Introduction

Rural and small town economies suffer from a lack of economic diversification, and from small size and isolation. At the same time, small communities often need help in organizing regionally based and locally driven comprehensive programs for economic development. In response to the apparent need for training assistance, the Center for Applied Urban Research (CAUR) and the Department of Public Administration at the University of Nebraska at Omaha (UNO) developed during the past two years a strategic planning approach for use by small towns. Altogether, the process has been successfully used in projects involving twelve communities in Nebraska.

This proposal from CAUR and the National League of Cities (NLC) requests funding to develop, produce, and disseminate prepackaged tools and training materials so that the process developed at UNO can be marketed and delivered to communities throughout the country by the National League of Cities at a reduced cost and by a wider network of trainers than is currently the case. Under the proposed project, the Center for Applied Urban Research would develop the strategic planning materials, while the National League of Cities would produce and market them.

A total of [fill in amount] is requested. Of this amount, $85,250 would be used by the Center for Applied Urban Research in developing the videos and guidebook series to support strategic planning for community economic development. The National League of Cities would use the remaining money to produce the videos and to edit, typeset, layout, and print the guidebooks. NLC would be the funding recipient and subcontract with the Center for Applied Urban Research.

A Brief History of the Nebraska Strategic Planning Project

In 1987, the Nebraska Department of Economic Development (DED) was awarded a 107 Technical Assistance Grant from the U.S. Department of Housing and Urban Development. The grant helped to continue efforts begun by DED and the Department of Public Administration, University of Nebraska at Omaha, in 1985 to help small communities increase their capacity to undertake strategic planning programs for economic development. During the past three years, eleven communities participated in the effort, as staff and
Strategic Planning for Local Economic Development

This self-help approach assumes that a small, core group (resource team) will prepare and organize the strategic planning effort; and that a larger local network (steering committee) will analyze the data, identify key issues, prioritize strategies and assume responsibility for coordinating and implementing the action plan. Within this general framework, however, are several possible roles for an outside educator/trainer, such as gathering national, state and regional economic data, facilitating the strategic planning sessions, and providing expert advice and feedback about the action plan.

1. Preparing and Organizing. This step involves learning about the strategic planning process, and about local roles and responsibilities; organizing a local resource team (core working group) and a steering committee (larger network) to participate in the workshops; and committing funds and local expertise, as needed.

2. Building a Local Data Base. This component is an assessment of the community's resources: physical infrastructure, administrative capacity, plans for expansion by local merchants, and so forth. Information is collected from local surveys. National, regional, state and county employment, population and labor force data are compiled from census and other sources.

3. Strategic Planning Sessions. The local network or steering committee meets in a retreat setting to examine and discuss external and internal factors impacting development in the area; focus limited resources on a selected number of realistic development options; and begin to coordinate the various local development objectives toward common objectives.
4. Forming an Action Plan. The steering committee meets again to form the document that focuses resources in the direction of strategic goals. Forming the action plan is a process requiring the steering committee to decide which development objectives should have priority over others; which projects should be undertaken to reach those objectives; which local groups or organizations should have responsibility for specific projects; and what steps should be taken to complete each project.

Assessing Community Readiness

A crucial dimension of this self-help approach is an assessment of community readiness for strategic planning. Experience in Nebraska and other states reveals that community transition, for example from a farm economy to an industrial or service base, is a very painful process for people. Intellectually, local leaders may recognize the need for change, but emotionally or psychologically deny the importance of the strategic planning data. This self-help approach recognizes and honors affective responses, and builds them into the process, so that negative reactions will not obstruct implementation of the strategic action plan.

A second aspect of community readiness is local capacity and commitment to economic development strategic planning: physical infrastructure; a formal organization structure for economic development (such as a chamber of commerce or an economic development corporation); public and private resources to invest in specific projects; a network of volunteers willing to serve on the strategic planning steering committee; and a small core of community leaders committed to managing the project and conducting some of the components of the process, such as organizing a community survey.

Self-help Training Materials

Assessing community readiness for strategic planning is an essential part of this self-help approach. Upon considering the prerequisites, community leaders may decide to postpone an economic development plan and seek community development funding or technical assistance. Such a decision would be preferable to wasting scarce local resources on a plan that fails to involve key local actors, is poorly organized, and is never implemented. Therefore, a crucial element of the self-help training package would be a short marketing video highlighting the following information:

- A description of the self-help approach to local economic development strategic planning;
• What other communities have accomplished using this approach, with testimonials from local officials;

• What the self-help approach requires of the core leadership or resource team;

• What options exist for hiring an outside educator/facilitator to help with certain components of the process;

• The approximate time, money and volunteer commitment required;

• A readiness checklist for community leaders; and

• A brief overview of the trainer’s package, cost, and how to order.

The training materials would include two additional videos, each with accompanying written materials. One of these videos would be designed for use by a local steering committee whose members have decided to assume responsibility for the entire project. Under this arrangement, the community resource team would coordinate the project, complete all of the organizational tasks, and recruit a local educator/trainer to facilitate the sessions. The local steering committee would play the "self help" video at the two planning sessions; and the video (with accompanying written materials) would walk the steering committee through the analysis of external and internal factors, identification of development options, and initial development of a strategic action plan. The local educator/trainer would introduce the video and facilitate the small group discussions in between segments of the video.

The third video is designed for use by local resource teams and by local and outside educator/trainers. As mentioned previously, a community has two basic options for using the community self-help training materials, either using local volunteers to conduct the project or contracting with an outside organization. The third video would train those people who will be organizing and facilitating community strategic planning projects. The video would follow a community from beginning to end, illustrating organizational, analytic and process techniques.

The trainers’ video is designed to be used by local educator/trainers who plan to rely on the "self-help" video, by local resource teams who are organizing community strategic planning projects, and by outside educator/trainers who will organize and train local steering committees. A training-the-trainers program would include the trainers video, a written trainers manual, and instruction in the use of the training package. The institutional umbrella for a training-the-trainers program might be a
university or a state agency division working with a state's league of municipalities; the exact organizational structure would be tailored to each state or locality.

Another major element of the training package would be community analysis computer software directly keyed to this strategic planning process. If the training package were used within Nebraska, the Center for Applied Urban Research would maintain the data bases to support the software. In other states, a university extension service or research bureau could develop and maintain the necessary data bases for use by communities, if desired.

- Marketing Video
- Self-help Video
- Self-help Manual
- Trainers Video
- Trainers Manual
- Community Analysis Software
- Action Plan Guidebooks

Communities would also have available to them one or more guidebooks on specific work areas targeted by the strategic action plan: retail development, business retention, service sector strategies, business attraction, for example. These guidebooks would contain detailed information about project design, specialized data bases, available financial resources and expertise, and case studies of successful projects in relevant work areas.

Budget and Staffing to Develop Self-help Training Materials

Project Staff

The training materials would be developed by Drs. Christine Reed, B.J. Reed, and Russell L. Smith in consultation with Dr. Willa Bruce, a professor of organizational development and an experienced trainer (see Appendix A for resumes of CAUR faculty). The videos would be produced under the direction of the National League of Cities. The training manuals and guidebooks would be edited and produced by NLC, as well. The entire project would be conducted under the administrative direction of the National League of Cities. Dr. Christine Reed, Associate Director of the Center for Applied Urban Research at the University of Nebraska at Omaha will supervise UNO's work.

Dr. Christine Reed and Dr. B.J. Reed have been actively involved in the Nebraska community economic development strategic planning program since
1982, when the idea was first developed with staff from the Nebraska Department of Economic Development. An article published in the *Journal of the American Planning Association*, and a chapter from a forthcoming book, *Managing Economic Development*, published by Jossey-Bass, Inc. are illustrative of the applications beyond the State of Nebraska (see Appendix B). Dr. Smith has worked in developing economic development programs for a number of rural and small communities in Nebraska, South Dakota, and Illinois. Dr. Bruce is a member of the Public Administration faculty at UNO, and she has extensive training experience in community and organizational development.

The Center for Applied Urban Research is a unit of the College of Public Affairs and Community Service (CPACS) at the University of Nebraska at Omaha, and has a history of research and service. CAUR provides professional services in policy and applied research, community service, technical assistance, and data base management. Although these services primarily are provided to state and local governmental units in Nebraska, CAUR also provides services to the private sector. Most of the work at CAUR involves using social science research techniques to create new information for policymaking and decisionmaking by clients.

CAUR assists governmental units, community groups, and the private sector in data collection, statistical analyses, problem-solving, and organization. CAUR has helped clients design surveys, assess needs, improve delivery of services, develop programs, strengthen planning efforts, and gain useful skills.

CAUR maintains a data and documents library to assist staff members in their research and to serve the university community and public. CAUR also maintains an extensive computerized data base containing information from the U.S. Bureau of the Census, U.S. Bureau of Economic Analysis, and other federal and state agencies.

The center has a multidisciplinary staff with expertise in a variety of fields, including economics, demographics, sociology, political science, economic development, strategic planning, and public administration. Professionals from throughout the university are encouraged to participate in CAUR projects.

CAUR is supported by a full-time editor, office manager, data base coordinator, librarian, students, interns, and several clerical personnel. In addition, the resources of the entire University of Nebraska system are available to the staff of CAUR. Thus, CAUR has both the experience and the expertise to serve as the lead agency for the development of strategic planning self-help training materials.

The National League of Cities would provide overall leadership and administrative support for the project. NLC is well suited to play this role.... [NLC complete this paragraph]
An advisory group representing state development agencies, public interest groups, regional councils of government, state and community colleges, and the Cooperative Extension Service would assist in reviewing drafts of the written materials and in previewing the videos.

Project Budget

The proposed budget covers four major activities: 1) development of the marketing and training videos; 2) development of the written training manuals and guidebooks; 3) development of the strategic planning software; and 4) production and marketing of the training package to communities and potential trainers. Following the budget summary is a discussion of options for recapturing the reproduction costs and possibly some of the development costs of the training materials.

I. Develop three marketing and training videos $17,500
II. Develop written training materials 45,000
III. Develop economic analysis software keyed to strategic planning process 15,000
IV. Produce, print, and market videos and guidebooks and print marketing brochure [NLC fill in]
    UNO Indirect costs (10% of total direct costs) 7,750

Total [to be filled in]

Marketing the Self-help Training Materials
[NLC needs to rework this section; it represents a "stab"]

The money spent developing quality training materials will be wasted if communities and trainers do not use them. Therefore, NLC and CAUR plan to use a two-pronged strategy to market the proposed materials. First, the active participation of an advisory group will ensure familiarity with and excitement about the product. Secondly, NLC will use its linkages with municipal officials, state leagues, and support organizations to market the materials. Marketing plans could include brochures, panels at national and annual league meetings, a national workshop built around the materials, and state-level networking workshops.
A portion of the costs of reproducing the videos and written materials would be recaptured by building those costs into the price. However, the actual development costs could be passed on to users, and the "profit" returned to the funding sources for this proposed project in proportion to their relative contributions. A modified version of the latter option is to charge communities and trainers according to a sliding scale based on ability to pay. The feasibility of these various options would need to be carefully studied before developing a detailed marketing strategy.

Higher Education

M.A. Brown University, Providence, R.I., 1974
Ph.D. Brown University, Providence, R.I., 1983

Professional Experience

1987 - Present  Associate Director, Center for Applied Urban Research. Responsible for assisting the Director in providing overall administration and direction for CAUR, including coordination of faculty research projects.

1983 - 1987  Assistant Professor of Public Administration, University of Nebraska at Omaha. Responsible for graduate courses in personnel administration, administrative law, and general public administration, as well as undergraduate public administration.

1982 - 1983  Instructor, Department of Public Administration, University of Nebraska at Omaha. Responsible for teaching undergraduate course in urban studies, graduate course in community and regional planning, and team-teaching in the Goodrich Program social science sequence for sophomores.

1979 - 1981  Project Coordinator, National Community Development Association, Washington, D.C. Coordinated the development of one-day staff development training sessions for local community development officials. Participated in training local community development officials in the elements of the 1978 Community Reinvestment Act. Identified and edited case study material for training guidebook. Assisted in conducting the training sessions. Participated in other technical assistance contracts.

March 1979 - August 1979  Staff Associate, New England Resource Center for Child Protective Services, Boston, Mass. Conducted as part of a consulting team a major systems analysis of the Rhode Island child welfare system for the State Budget Office.
The report resulted in the consolidating of four separate children's service agencies into a consolidated Department of Children and Their Families, and development of a management information system integrating the functions of the four agencies.

1974 - 1979
Research Associate, Bureau of Government Research, University of Rhode Island. Provided technical assistance to local governments in the areas of general organization and management; personnel administration; community needs assessment and survey research; organizational development. Supervised and conducted several position classification and pay studies for Rhode Island local governments. Supervised a community needs assessment, "Goals for Lincoln." Participated in state-wide training needs assessment for local governments. Supervised MPA student interns. Guest lectured in MPA courses.

Professional Experience  (Consulting)

1984 - 1985
Conducted a management study for the City of Alliance, Nebraska (with B.J. Reed). Conducted a strategic planning pilot project in two Nebraska communities, under contract with Nebraska Department of Economic Development (with B.J. Reed). Completed a strategic planning guidebook for local officials.

1983 - 1984
Participated as a trainer in community development planning for the Nebraska Municipal Clerks School.

1982 - 1983
Participated in development of a performance appraisal system for the Beatrice State Developmental Center, State of Nebraska.

Participated as a trainer at two economic development conferences for Nebraska local officials under contract with Nebraska Department of Economic Development.

1978
Project consultant to National League of Cities on HUD-funded survey of development needs of small cities. Disaster investigator for National Governors Association under contract with Defense Civil Preparedness Agency in conducting Emergency Preparedness Project. Visited two disaster sites, interviewed key actors, and analyzed organization response among four levels of government to disasters.

Mr. David Sears
Economic Research Service
Government and Development Policy Section
U.S. Department of Agriculture
1301 New York Avenue
Washington, D.C. 20005-4788

Dear Dave:

Enclosed is the proposal we discussed over the phone last Friday. It seeks funding to develop, produce and market self-help training materials for community economic development strategic planning. As indicated in the proposal, we have already designed the process based on experience with eleven small rural Nebraska communities; however, the development of the training package will cost an estimated $87,500, plus university overhead expenses. At this point, we assume that the videos and written materials developed and produced in Nebraska could be reproduced and marketed nationally. For example, scenes of an actual strategic planning session could be filmed in Nebraska, but identified simply as a typical small rural community. If we were to expand development and production beyond Nebraska, total costs would increase accordingly.

We are simultaneously approaching funding sources within the state, and we think we can raise $30,000 from corporations, utility companies, and others. Therefore, we are requesting $57,500 from the United States Department of Agriculture. While the Economic Research Service is our first point of contact, the Cooperative Extension Service or other division may also be interested in this project.

Russell Smith will be visiting you in a couple of days to discuss the self-development RFP, as well as other matters. He is prepared to answer any questions about the self-help training proposal. If you think that we should pursue funding elsewhere in the department, please let Russ know. We think the enclosed proposal is an exciting idea with applications beyond Nebraska. I look forward to talking with you again.

Sincerely yours,

Christine Reed
Associate Director

  - economic development
  - finance administration

Activities included:
  - project director for congressionally mandated study of small cities' developmental needs
  - supervision of peer-to-peer technical assistance effort aimed at cities in the Midwest
  - preparation of successful and innovative uses of Community Development Block Grant program
  - development of a housing rehabilitation guidebook for smaller cities
  - coordination of a technical assistance project for larger cities in housing rehabilitation
  - development of local review panels for HUD on congressionally
sponsored research administration of a major
city economic development program for
communities including information,
training and direct assistance

5/75 to 10/78
Director of Community Development
City of Mexico, Missouri

Duties
Administration of the City's $1.5
million HUD Community Development
Block Grant program (housing reha-
bilitation, new construction of
housing, social services and various
public works activities.
Over-site of various intergovernmental
grant-in-aid programs for the Depart-
ment of Commerce, Interior, Health,
Education and Welfare and various state
programs

9/74 to 5/75
Administrative Intern
City Manager's Office
Mexico, Missouri

Duties
Supervision of refuse collection
Preparation of flood ordinances
Preparation of Workable Program
for the Department of Housing and
Urban Development

9/71 to 5/72
Research Assistant in Political Science
Fort Hays State University
Hays, Kansas

Professional Experience
(Teaching)

8/85 to Present
Chairman of the Department of
Public Administration
Currently serve as Graduate Fellow
allowing supervision of students
pursuing masters and doctoral degrees

9/84 to Present
Associate Professor of Public
Administration - University of
Nebraska at Omaha - Omaha, Nebraska
Assistant Professor of Public Administration - University of Nebraska at Omaha - Omaha, Nebraska

Lecturer in Masters of Public Administration Program - University of Missouri-Columbia - Columbia, Missouri

Teaching assistant in the Political Science Department - University of Missouri-Columbia - Columbia, Missouri

Instructor in the Social Science Department - Southwestern State College - Weatherford, Oklahoma

Directed Student Teaching Trego Community High School Wakeeney, Kansas

Primary Teaching Fields

Undergraduate:
- American Government
- Introduction to Political Science
- Introduction to Public Administration
- Municipal Administration
- Public Budgeting

Graduate
- Introduction to Organizational Theory, National and Subnational Policy Processes
- Public Budgeting
- Municipal Administration
- Seminar in Public Administration (computer applications, accounting, economics)
- Special Topics in Public Administration (intergovernmental management)
- Public Finance Administration
- Public/Private Cooperation

PROFESSIONAL EXPERIENCE

1985 - Present Assistant Professor
Department of Public Administration, UNO, Omaha, NE

Teach MPA graduate classes in public administration, organization theory, behavior, and development. Direct the Nebraska Municipal Clerks Certification School. Serve on national Professional Development Committee of the American Society for Public Administration and as faculty advisor to Nebraska Student ASPA. Member of the University Graduate Council, Faculty Senate, and College Curriculum Committee. Serve as Department Library liaison. Chair Committee A of the Graduate Council.

1983 - 1985 Director of Upward Bound/Talent Search
Department of Sociology, VPI & SU, Blacksburg, VA

Reorganized, revitalized, and re-established program credibility while obtaining federal funding and supervising staff of 21.

1981 - 1983 Instructor
Department of Management, VPI & SU, Blacksburg, VA

Taught Personnel Administration and Administrative Theory and Practice to College of Business juniors and seniors.
1980 - 1981  Public Safety Coordinator  
Charleston Housing Authority, Charleston, WV

Obtained almost one million in new federal dollars to establish and manage anti-crime program funded by five federal agencies. Administered programs and supervised staff of 77.

1975 - 1979  Director of Program Development and Training/EEO Officer  
Charleston Housing Authority, Charleston, WV

Developed and implemented the staff training and EEO/AA programs. Assisted in recruitment, made selection and promotion decisions, managed grievance process for both union and non-union employees, performed job analyses and did a compensation study, wrote personnel manual, counseled troubled employees.

1966 - 1975  Held various social service positions with the Charleston Housing Authority and with the West Virginia Department of Welfare. These included: Director of Leasing, Assistant Director of Social Services, Social Service Supervisor, and Social Worker.

Assessing Readiness for Economic Development Strategic Planning

A Community Case Study

Christine M. Reed, B. J. Reed, and Jeffrey S. Luke

Current approaches to strategic planning overlook the importance of being ready to undertake such a complex and significant process. Our experience with a strategic planning project in Beatrice, Nebraska suggests that denial, anger, blame, depression, and withdrawal are common but subliminal reactions to economic change. Unless planners recognize these affective responses and build them into the strategic planning process, negative attitudes will be an obstacle to new economic strategies. This article describes a preplanning component that planners in Nebraska now incorporate into community economic development as a result of the experience in Beatrice.

Strategic planning has become a popular process for economic development planning. Cities as varied as Oakland, California, Eugene, Oregon, and Beatrice, Nebraska have established strategic plans for stimulating job creation and economic diversification. Much of the recent planning activity has emerged from three insights (Luke et al. 1987):

1. Communities cannot rely on federal initiatives and must take an active responsibility for developing and testing appropriate economic development strategies.

2. There is no single best way for communities to stimulate economic growth. They must develop individually-tailored strategies that are custom designed to the strengths and capacities of their local and regional economies.

3. Custom-tailored strategies must be developed collaboratively among key government and business leaders, not unilaterally by the city chief executive.

Several excellent strategic planning processes are now available to improve the effectiveness of community economic development policies (Bryson and Roering 1987; Sorkin, Ferris, and Hudak 1985). Currently, the State of Nebraska Department of Economic Development, the University of Nebraska at Omaha Department of Public Administration, and the Heartland Center for Leadership Development are testing one such version in four communities (Figure 1).

The Nebraska approach begins with the organization of community leadership, commitment of local resources, and development of a data base (step 1). Succeeding steps involve identifying "external" trends likely to affect local economic development and con-
ducting an inventory of "internal" strengths and weaknesses, particularly with respect to opportunities and threats in the environment (steps 2 and 3). Finally, this approach includes specific methods for developing and prioritizing strategies, and for designing an action plan to implement those strategies (steps 4 through 7).

The objective of this article is to describe the justification for, and the initial details of, a unique addition to the first step: organization. In addition to the elements described above, this phase includes a preplanning workshop that emphasizes organizational and leadership development. The purpose of the workshop is to address the affective, emotional issues raised by strategic planning that might otherwise present obstacles to effective planning.

Recent research reveals a characteristic set of attitudes and perceptions in communities whose leaders underestimate the gravity of economic difficulties. Those attitudes are variously characterized as "learned helplessness" (Hibbard 1986) and "powerlessness" (Kraushaar 1984). Even after experts provide technical assistance that suggests the need for economic diversification, communities that depend on a declining industry do virtually nothing with the information. The findings suggest that accurate information is a necessary but insufficient condition for successful strategic planning. The community's leaders also require new perspectives.

Obstacles to effective strategic planning

Among the distinguishing characteristics of strategic planning is the analysis of shifting environmental forces and their likely impact on the organization or community. In the economic development literature, one of the most pervasive and documented trends is the stagnation or decline of industry and the growth of the service sector. Along with that trend, formation and expansion of new business seems to be an important supplement to traditional industrial attraction strategies.

Many communities, especially those that historically have depended on a single industry, such as forestry in the Pacific northwest, agriculture in the rural midwest, and "smokestack industries" in the Great Lakes region, are now suffering from the effects of industrial relocation and dislocation. Such communities need to diversify their economies. However, new economic strategies require broad community participation and collective commitment or vision. For many communities, that requirement seems an insurmountable obstacle.

As Hibbard (1986) notes about declining communities in the Pacific northwest, self-help and technical assistance approaches to economic development presume that communities can be easily mobilized to respond to economic threats because people see themselves as having a common fate. Accordingly, if communities have up-to-date information about economic trends, they can devise and implement appropriate economic development strategies. That assumption is not accurate, however, if the communities lack a sense of common purpose. Community leaders often see themselves as the only active people in their communities, and they perceive others in their communities as apathetic, hypercritical, and unwilling to participate in development efforts (Hibbard 1986).

In addition to community apathy, leaders must also face their own theories and biases about what constitutes effective economic development. Despite what the strategic planning process might reveal, it may be very difficult for them to visualize economic development in terms other than attracting new industries. Communities often try to replace one industrial firm with another, investing scarce human and financial resources in the effort, when statistics show that nationally fewer firms are relocating (Birch 1987). Paradoxically, they are unwilling to make a similar commitment to forming new businesses even though considerable research suggests that employment growth now comes primarily from nascent and indigenous firms (Weinberg 1987).

Communities often show similar resistance to investing in the service sector. Many planners and government and business leaders question whether their communities should become dependent on services as their primary base of activity. As one bank executive remarked, "We do not want to become an economy where we take in each others' laundry" (Shelp 1982). Such negative attitudes overlook the growth of nontraditional service firms (telemarketing, computers, and health services, for example) as major export activities for many communities, and this lack
of vision can contribute to the community's long-term economic decline (Beyers, Alvine, and Johnsen 1985).

In the face of apathy and resistance, the strategic planning process is bound to be ineffective. Attitudes and perceptions characteristic of an individual with a terminal illness can delay the formulation and implementation of new economic strategies, as community leaders deny the implications of external threats and opportunities and internal strengths and weaknesses.

**Common attitudinal responses to economic decline**

Studies of death and dying over the last ten years have revealed a common progression of attitudes that individuals with terminal illnesses seem to experience. In the final stage of the process, the dying person apparently accepts impending death, and as a result undergoes a radical shift in perspective, allowing him or her to see the possibility of a new form of life.

According to Kubler-Ross (1985) people react to their terminal illness with the following steps: First, they deny the message. In this denial phase, they refuse to talk about their pending death, but instead talk of miraculous cures and getting well. Denial is the first, and very common, stage in a progression toward eventual acceptance of the situation. Anger and blame typically follow, the individual experiencing different intensities of rage. Initial reactions of denial, anger, and blame are part of the process of letting go of physical and, especially, psychological attachments to those in the dying person’s environment. The third stage is depression and withdrawal, in which the person commonly attempts to close himself off from outside intrusion. Acceptance is the last psychological stage in the process of dying, and it typically generates a sense of hope, of knowing, and of planning.

These attitudes are analogous to a community’s or individual’s psychological reaction to economic decline (see Table 1). As the following case study of Beatrice, Nebraska illustrates, leaders in some communities may hold attitudes similar to the denial stage, while leaders in other communities may express beliefs suggestive of later stages of death and dying (Hibbard 1986). Of course, there is no systematic evidence to suggest that community leaders actually pass through a sequence of emotional reactions. The following framework is therefore only heuristic; however, the experience described in the case study below convinced us that feelings of denial, anger, blame, and depression are critical—and often unrecognized—obstacles to effective strategic planning for economic development.

In a deteriorating economy, leaders may deny the reality of the situation. Individuals accept the notion that “these are hard times, but of course things will turn out.” During the 1980s, city and county policymakers have been particularly vulnerable to this assessment. They explain away the economic disruptions in their communities as cyclical ups and downs in industry rather than as a major structural shift in the global market that permanently influences the local economy. This denial reaction is particularly evident in single-industry towns where survival depends on one industry or business. The copper towns in Arizona, mining communities in Appalachia, lumber mill towns in the Pacific northwest, and the farming communities of the agricultural midwest provide examples of such an attitude.

Another attitudinal “set,” anger and blame, often is characterized by finger-pointing (e.g., “Our chamber of commerce executive is incompetent—nothing is happening,” or “If it weren’t for the Japanese . . . ”). Critics often place responsibility for economic decline on individual leaders, past or present, who have had some visible—but often overgeneralized—connection to the state’s or community’s economic troubles. For example, many Oregonians currently blame Governor Tom McCall, who served from 1972 to 1976, for the state’s relatively unsuccessful industrial recruitment strategy. During his term, McCall invited Americans to “come and visit Oregon but please don’t stay.” That statement, uttered in the early 1970s, remains today in the minds of many who blame McCall for Oregon’s recession in the 1980s.

Critics can also blame a single government policy or regulation for a stagnant economy. Some business leaders blamed Nebraska’s high personal income tax rate for difficulties in attracting and retaining corporate executives to the state. Agricultural communities, dependent on grain production, similarly blame their economic woes on President Carter’s grain embargo against the Soviet Union.

Ineffective strategies will likely result, creating worse problems by draining important human and fiscal resources and by diverting community attention from policies that are potentially more successful.

Depression and withdrawal often occur following the recognized failure of traditional economic development policies. Community leaders may withdraw from active participation in economic development efforts, having "burned out" from apparently fruitless efforts. Others experience a sense of depression when they see their control over local destiny limited or diminished. The reduction in federal aid, combined with the expanding global economy and internationalization of markets, creates a sense of helplessness.

Community leaders see themselves as passive observers rather than active decision makers, and can be heard saying, "There is little we can do to save our community," or "We have no control over our fate." Feeling helpless and pessimistic, and lacking faith in the future, they avoid active planning efforts. Commenting on the impending shutdown of his town's second largest lumber mill, a mayor expressed his helplessness by saying, "It would hurt a substantial portion of our local economy (if the mill closed), but it would not be the end of the world. We'd learn to adjust. It would be similar to cutting off a boy's arm or leg during surgery—he learns to live with it" (Hibbard 1986).

A fourth set of attitudes emerges from economic development planning, attitudes strikingly similar to Kubler-Ross' fourth stage of "death and dying." Acceptance, hope, and planning often arise from the realization that the local economy is influenced by local policies and that governmental action in partnership with businesses and nonprofit agencies can influence economic growth. Underlying this attitude is the understanding that successful economic development does not occur overnight, and may require persistent, often painful efforts.

When affective, emotional issues are not recognized and built into the planning process, denial, anger, and withdrawal responses may be a persistent subliminal force within a group of community leaders and may obstruct the strategic planning process. Underlying virtually all approaches to strategic planning is the assumption that accurate, up-to-date information is sufficient to move the process along successfully. As the following experience illustrates, however, that assumption is highly questionable.

The experience of Beatrice, Nebraska

Beatrice is the county seat of Gage County, in southeastern Nebraska. Its 1980 population of 12,891 represented a 4 percent increase in ten years—a slightly higher growth rate than the previous decade, but lower than the growth rate for the state as a whole. Southeastern Nebraska generally has experienced a steady loss of population, in contrast to counties bordering the interstate highway running east-west across the center of the state; those counties are experiencing population growth.

The age distribution of the population reflects national trends: a steady decline in population under 18 years of age since 1960, a steady increase in the elderly population, and a bulge in the "baby boom" group of 25- to 34-year-olds. On the other hand, Beatrice does not appear to have suffered from a substantial outmigration of 15- to 24-year-olds, and in this sense it is unique in southeastern Nebraska.

Beatrice is at the intersection of two, two-lane state highways, and it is 40 miles south of the interstate. The state has repeatedly delayed plans to widen the north-south route, and the narrow, winding highway has been a hindrance to trucking and manufacturing in southeastern Nebraska. The closest metropolitan area is Lincoln, roughly 40 miles northeast.

Strip commercial development lines the state highway beginning several miles north of the city and blending into the central business district at the crossroads of the north-south and east-west highways. An industrial area lies immediately south and west of the central business district, roughly coterminous with the rail lines of the Union Pacific and the Burlington Northern railroads. The Gage County Courthouse, just north of downtown, is at the western edge of a
residential area; the residential area runs east for several miles and ends at the edge of farmland. The Beatrice State Development Center for mentally retarded youth occupies several hundred acres at the edge of the residential area.

The economic base of Gage County (Beatrice)

According to economic base theory, local employment, tax revenues, and income are closely tied to "export industries," defined as firms that generate labor and business income from the sale of goods and services outside the community's boundaries (National League of Cities 1979). Furthermore, because the local economy is more specialized and therefore less self-sufficient than the national economy, dependence on a single export industry renders the community vulnerable to shifts in external economic conditions. Diversification is the best insurance against change.

Using economic base theory as a starting point, it is clear that several broad employment categories generate export employment in Beatrice and Gage County (Table 2). There are a total of 1491 export jobs spread over six major industries. Upon closer analysis, however, it becomes apparent that each of two of the largest categories, manufacturing and services, contains a single industry, accounting for most of the export jobs. Manufacturing export employment comes mainly from the furniture industry, and services refer principally to health services (the Beatrice State Development Center). Further diversification is therefore desirable to cushion the local economy against either a downturn in the health industry or a major business failure in the local furniture industry.

Gage County's competitive position

Shifts and shares analysis is a computational technique that describes the shifts in U.S. employment by industry, and the local or competitive share of employment change by industry (National League of Cities 1979). Shifts and shares analysis answers two basic questions: first, which industries are growing faster (or more slowly) than the total mix of all national industries, and second, is the local area getting a larger or smaller share of each industry. Table 3 shows the significance of these questions for strategic planning.

Each cell of the two-dimensional matrix suggests a different set of strategic issues. For example, a community with an increasing share of an industry that is growing, compared to the total mix of industries

a. Employment categories are Standard Industrial Classification codes.
b. We calculate the number of export jobs by comparing the local employment in each industry to total employment in each industry nationally. An industry is an exporter for a community if industry employment exceeds the number of jobs required for the community to be self-sufficient in that industry. (Appendix 1 contains a description of how to estimate self-sufficiency and export employment.)
c. The furniture industry is the major exporter in this category.
d. Health services is the major exporter in this category.
e. Agricultural services include farm labor and management services.

a. Growth industries are those which have experienced employment growth, compared to the total mix of U.S. industries.
b. Increasing local or "competitive" share of an industry means that employment in an industry is growing locally at a greater rate than it is growing nationally.
nationally, needs to try to retain and possibly expand those local firms (cell 1). Conversely, a growing share of a declining industry may be a "red flag" for community leaders (cell 2). National trends may have a negative effect on local industries; and, even though an increasing local share normally reflects strengths in the local economy, a present internal strength could become a liability in the face of external changes in the economy. Such is the case with certain manufacturing industries.

The cell representing a declining share of a slow or no-growth industry implies both external threats and internal weaknesses (cell 4). However, a declining share of a growth industry should signal community leaders to explore the reasons why the local share is declining (cell 3). Negative internal factors may affect development and community leaders may have virtually no control over them. On the other hand, the community may be able to take steps to reverse the declining local share of an otherwise healthy industry.

Applying this matrix analysis to Gage County (Table 4) presents a somewhat disheartening picture. Agricultural services and general construction present opportunities for retention and expansion (cell 1). Unfortunately, in the wholesale of nondurable products (e.g., fertilizer), in the manufacture of furniture and apparel, and in certain service categories, the local share is increasing, but the trend nationally is downward (cell 2). Employment is declining in almost all other manufacturing industries (nonelectrical machinery is a notable exception) (cell 4). The same trend generally has occurred in the retail trade categories. Moreover, the local share of these industries is also declining, thus presenting few opportunities for economic diversification. 3

</tbody>
</table>

The industries represented in cell 3 present a somewhat more complicated picture. Nationally, employment in the services categories is increasing compared to total industry growth; however, much of that growth is in nontraditional services, such as research and development and information services. Nebraska's business climate is not conducive to "high tech" firms, in part because until recently the state government has failed to devote sufficient resources to higher education. However a highly motivated community can take the lead in attracting newer service firms to the state. For example, Nebraska's geographical location maximizes access to coastal time zones during regular working hours. That factor, coupled with the availability of well-educated and highly motivated part-time workers from family farms, makes communities like Beatrice attractive to telemarketing firms.

Health services create another potential growth area for Beatrice. While employment in the health services sector has increased, Beatrice has lost its competitive advantage, primarily because of the deinstitutionalization of the Beatrice State Developmental Center during the 1970s and subsequent lay-offs. To reestablish a competitive position in the health area, community leaders would have to wage a major campaign to attract more medical specialists and support personnel to Beatrice. However, employment losses in health services, relative to national trends, are minimal, and overall this sector of the local economy has been a sound base of employment (see Appendix 2).

Summarizing the external and internal factors affecting local development, Beatrice needs to further diversify its economic base; however, shift-share analysis suggests only a few areas. One is in selected services, such as health and telemarketing. Nonelectrical machinery is another area. Furthermore, other manufacturing categories may grow again in the future, offering opportunities for either industrial attraction or expansion of existing firms. However, Gage County's competitive position must be strengthened if it is to capitalize on those opportunities. The question for Beatrice and Gage County leadership is where to target scarce financial and human resources. Given

Agriculture supports several small businesses in Beatrice

526
the external and internal factors affecting manufacturing development, they can ill afford to invest everything in industrial recruitment.

**Obstacles to strategic planning in Beatrice**

The mayor and the chamber of commerce executive assembled a group of government and business leaders to serve as the strategic planning team. Staff from the Nebraska Department of Economic Development coordinated the data-gathering and technical assistance, and we were the project facilitators. We held three all-day meetings during the year-long pilot project. At the first session, the facilitators presented information about the local economic base and national and statewide employment trends, as described in the previous section. At the second meeting, the local group developed its strategic action plan, and at the final meeting, we met with the local group to assess implementation.

At the first meeting, the facilitators attempted to lead a discussion aimed at identifying development opportunities that capitalized on internal strengths. Areas experiencing growth nationally presented the best opportunities. Conversely, the facilitators tried to point out areas where either external trends or internal factors were not conducive to economic growth. The objective of the first session was to identify strategic issues that would become the basis for the strategic action plan.

It is clear in retrospect that the facilitators did not prepare the Beatrice group for strategic planning. During the initial session, some members expressed a desire for advice on more effective industrial recruitment. Others were openly hostile to the presentation, particularly its implication that industrial development in Beatrice might be of limited success. They argued with the facilitators, taking the position that even though manufacturing was not currently a major strength of the local economy, they could make it so with the right industrial recruitment techniques. A few challenged the accuracy and validity of the data itself. As for the evidence of growth in the service sector, the attitude of most of the group was that the service/retail sector would take care of itself. Apparently jolted by the implications of the presentation, community leaders reacted by defending the perspective with which they were most familiar: that the best prospects for continued growth were industrial recruits from outside the state.

When it became apparent to the facilitators that the team was becoming very defensive, they decided to separate the team into three groups for the second meeting. The first group would develop an action plan for the manufacturing sector, while the other two teams would develop service and retail strategies. The facilitators hoped that by splitting the team and structuring the discussion in a way that included service and retail strategies, they would move the group past its negative mood.

The action plans that the three groups developed did indeed take into account other possibilities besides industrial recruitment. The manufacturing team recommended lobbying for an expansion of the two-lane state highway to a four-lane highway to improve access to transportation. They also proposed developing a plan to anticipate needs for additional housing following industrial recruitment. The service and retail groups concentrated on strengthening internal factors that would promote new business, especially service firms: strategies included developing leadership, improving the community's image among its own citizens, identifying the market for new service firms, and creating a volunteer network of chamber of commerce members to assist potential entrepreneurs in Beatrice.

The composite action steps, with their functions, time frames, and assigned leaders, represented a strategic plan for the Beatrice economy and reflected both external trends and internal strengths. During a six-month period, the group worked to implement the plan, and the facilitators scheduled a follow-up meeting to assess progress toward their strategic objectives.

The true extent of resistance to the strategic planning process became evident at the third meeting. The group members in attendance had devoted most of their time during the previous six months to working with the chamber of commerce executive to attract a new industry to the community. There was virtually no progress on any of the action steps. They expressed deep reservations about the strategic plan, because of the amount of time they would have to devote to nurturing new leadership and helping potential entrepreneurs. They also believed that because of the high failure rate of new firms, assistance to small businesses was not worth their time and effort. The negative reactions evident at the first meeting had obviously not changed.

**Making sense of the Beatrice experience**

The reactions of the Beatrice strategic planning team were characteristic of the denial stage in the Kubler-Ross framework. When confronted with information about external trends and internal strengths and weaknesses, they dismissed the information as irrelevant to their own goals for the community. During the implementation phase, they proceeded on the basis of "business as usual." It became clear that their expectations of strategic planning were that the facilitators would provide them with up-to-date information on the most likely industrial targets and techniques for luring them to the community.

Words and phrases heard during the planning sessions were characteristic of the denial stage: "These are hard times, but things will turn out," and "It's just temporary—it'll get better soon." The team members virtually refused to acknowledge that major structural changes in the national economy were having
Preparation of community leaders for strategic planning

The Beatrice experience and the critical lessons learned resulted in a redesign of the strategic planning process. The Nebraska Department of Economic Development, the University of Nebraska at Omaha Department of Public Administration, and the Center for Applied Urban Research, currently are undertaking the second year of the pilot project with four communities. The Heartland Center for Leadership Development has joined the project to conduct "community training" and to develop indigenous leaders as internal development catalysts. The Heartland Center's mission is to promote strategic thinking and an entrepreneurial spirit in Nebraska by developing community leaders who understand the constraints and opportunities of the post-industrial economy. This training component is new to the Nebraska project, and it includes a unique combination of strategic planning and organizational development methods.

The Heartland Center defines an "entrepreneurial community" as one "whose leadership demonstrates a highly positive attitude and possesses the capability to motivate the community to identify and constructively exploit new opportunities for community survival" (Luther and Wall 1986). To develop such attitudes and capabilities, the Heartland Center staff are spending two days in each pilot community prior to the beginning of the strategic planning process. In an intensive retreat setting, the staff work with business and governmental leaders who will be the steering committee for the duration of the process.

The content of the retreat is a series of short presentations and small group activities aimed at creating a basic understanding of strategic planning, increasing awareness of how resistance to change can hamper strategic planning, and stimulating thinking about strategies for economic diversification and community survival that go beyond local history and current issues. The group uses a community case study to simulate the steps of the strategic planning process. Debriefing allows community leaders to reflect about their own community. As the city administrator of the first test community remarked, the case study was a nontargeting way to be introduced to strategic planning and to be confronted with one's own attitudes about economic change.

Conclusions

Our purpose in this paper has been to begin a discussion around an aspect of strategic planning that is frequently overlooked by economic development specialists and community planners. The Beatrice experience illustrates the importance of the negative effect of emotional issues on strategic planning—a point being discovered by others in similar contexts. We are therefore confident that we have identified a significant underlying dimension to what is otherwise considered a purely rational process.

Following the pre-planning workshops, community leaders will look at their local situations without denial, anger, or depression, open to the possibility that traditional approaches to economic development may be insufficient, that the analysis of external op-

Preparation of community leaders for strategic planning

The Beatrice experience and the critical lessons learned resulted in a redesign of the strategic planning process. Conclusions

Our purpose in this paper has been to begin a discussion around an aspect of strategic planning that is frequently overlooked by economic development specialists and community planners. The Beatrice experience illustrates the importance of the negative effect of emotional issues on strategic planning—a point being discovered by others in similar contexts. We are therefore confident that we have identified a significant underlying dimension to what is otherwise considered a purely rational process.

Following the pre-planning workshops, community leaders will look at their local situations without denial, anger, or depression, open to the possibility that traditional approaches to economic development may be insufficient, that the analysis of external op-
opportunities and threats will identify new strategies, and that those changes may call upon them to exercise a more active role in developing community resources, including a wider network of local leadership. However, we are not attempting a controlled experiment to establish the impact of leadership development training on attitude change. We hope instead that our findings will stimulate other case studies exploring the link between "entrepreneurial leadership" and effective economic development policies.

Export employment (column 5) is calculated by estimating how much employment would be expected locally for each industry if the locality were self-sufficient in producing goods and services (column 4) and subtracting that number from the actual number of local jobs in each industry (column 3). Self-sufficiency is defined as the same percentage in each industry locally relative to total employment in that industry nationally as a percent of total national employment (National League of Cities 1979).

a. Numbers in parenthesis are negative.
National growth refers to employment increase from 1976 to 1981 that would have occurred in the county if this industry had grown at the same rate as national employment grew across all industries.
Industrial mix is the change in employment in this industry in the county from 1976 to 1981 that would have occurred because of the difference between the national growth rate for this industry and the average growth rate for all U.S. industries.
Competitive share indicates whether the county has attracted a larger share of this industry between 1976 and 1981, or has lost a portion of its 1976 share to other regions.

Notes
1. An expanded discussion of this strategic planning model, along with a comprehensive synthesis of local economic strategies, appears in Luke et al. forthcoming.
2. Appendix 1 contains a more detailed analysis of the export base of Beatrice and Gage County.
3. For more detailed analysis of the shifts and shares for Beatrice and Gage County, see Appendix 2. Ideally, shifts and shares analysis would include computations of state and regional trends by industrial classification; however, this information was unavailable.

Managing Economic Development
A Guide to State and Local Leadership Strategies

Jeffrey S. Luke, Curtis Ventriss
B. J. Reed, Christine M. Reed

More and more of the responsibility for achieving economic growth—creating new jobs and businesses, revitalizing downtown areas, providing more and better housing, and improving public services—is falling on the shoulders of state and local leaders. As a result, these public managers and policy makers are finding themselves face to face with difficult and unfamiliar questions: What kind of public leadership is needed to achieve economic goals? How can private investment be stimulated? Where should scarce public resources be invested? What economic strategies will foster long-term growth?

This new book shows state and local leaders who are grappling with these questions how they can successfully develop and manage strategies for stimulating real economic growth in their communities. Explaining that no one strategy or policy for development is appropriate for all state and local economies, the authors detail how to custom-design a successful economic development program that builds on the specific strengths of each community. To demonstrate possible strategies and show how they work in real life, the authors also present examples of proven and innovative ways other communities have stimulated growth—such as encouraging new businesses to relocate to the community, fostering small businesses, seeking foreign trade and investment, and more.

CONTENTS

Part One: Realizing the Potential of Economic Development

1. Providing Leadership at the State and Local Levels shows how—by using a strategic approach to management—public leaders can revitalize their economies and ensure long-term development.

2. The Challenge of Stimulating Economic Growth and Change offers guidelines for overcoming roadblocks—such as massive bureaucratic structures—that can thwart success in economic development. Outlines innovative approaches for achieving economic growth—such as encouraging start-up businesses.

Part Two: Effective Planning and Implementation

3. A Strategic Approach to Economic Development: A Step-By-Step Process uses examples from states and communities to demonstrate how to organize a strategic development plan, develop specific growth strategies, and then create and implement a program for action.

4. Organizing for Strategic Economic Development describes ways of organizing a strategic growth plan. Discusses how to effectively coordinate the involvement of businesses, government agencies, educational institutions, and other organizations.

5. Fostering Small Business Formation and Expansion shows how small firms can provide state and local economies with the bulk of their new jobs. Examines how to target businesses with high growth potential and outlines strategies to ensure that growth.

6. Attracting and Retaining Business Enterprises explains how to create a strategy for recruiting traditional manufacturing firms, as well as service, retail, and high-tech companies—and describes incentives that will also help attract businesses.

7. Examining International Trade and Investment Opportunities explains why programs for encouraging foreign trade and investment in the local economy are essential to an effective growth plan. Outlines factors to be considered before a foreign economic agreement is made and offers examples of successful programs.

8. How Colleges and Universities Can Enhance Development shows how public officials can work with higher education institutions to provide quality job training, new product research, and information on economic trends and policies that will help achieve long-term growth.

Part Three: Successful Leadership Strategies

9. Community Leadership Strategies offers local leaders several possible frameworks for developing community economic goals and describes specific strategies that are most effective at the local level.

10. State Leadership Strategies shows state leaders how to formulate economic strategies that will draw effectively on their most outstanding resources—such as education, transportation, human resources, or natural resources.

11. Catalytic Leadership: The Key to Successful Economic Development outlines the interpersonal, conceptual, and technical skills that public leaders and managers need to effectively implement economic growth strategies. Identifies potential leadership problems and details steps for effectively handling them.
