Legislature's Planning Committee: 2014 Associated Reports

The Nebraska Legislature's Planning Committee was created in 2009 with the passage of LB 653 in order to help establish a process of long-term state planning with the Nebraska Legislature. The committee was created to assist state government in identifying emerging trends, assets and challenges of the state and the long-term implications of the decisions made by the Nebraska Legislature.

Efforts during the first two years of the committee focused on the development of a database. The goals and benchmarks included in the database were developed and approved by the Legislature's Planning Committee to present a common-sense and data-driven assessment of key areas important to Nebraskans' quality of life. This database was a joint initiative with the Nebraska Legislature's Planning Committee and the University of Nebraska at Omaha's College of Public Affairs and Community Service (CPACS). The database was presented in a report that consisted of the data and summaries of the data for each of the nine categories of benchmarks established by the Planning Committee. Each year, the Planning Committee is in charge of updating the data for all benchmarks in each category. It is hoped that this will be of instrumental assistance to Legislators and staff as they craft and debate legislation each Session.

In addition to the statewide database, CPACS has prepared a series of Associated Reports for the Planning Committee that provides data for Legislative Districts, counties, and census tracts. These reports address the benchmarks established by the Planning Committee. These reports include:

- Nebraska Legislative District Quick Facts from the 2009-2013 American Community Survey
- Selected Characteristics for Nebraska Legislative Districts from the 2009-2013 American Community Survey
- Selected Characteristics for Nebraska Counties from the 2009-2013 American Community Survey
- Selected Characteristics for Census Tracts in Douglas, Sarpy, Lancaster, and Hall Counties, Nebraska, from the 2009-2013 American Community Survey
- Own Children with All Parents in the Labor Force for the State of Nebraska and Legislative Districts and Counties from the 2009-2013 American Community Survey
- Ratio of Income to Poverty Level for Children under 18 Years as a Percentage of the Population for Whom Poverty Is Determined for Nebraska Legislative Districts from the 2009-2013 American Community Survey

Ratio of Income to Poverty Level for Children under 18 Years as a Percentage of the Population for Whom Poverty Is Determined for Nebraska Legislative Districts from the 2009-2013 American Community Survey

The following tables and graphs look at the number and percentage of children by comparing their families' incomes to the poverty level. The data are from the U.S. Census Bureau's 2009-2013 American Community Survey (ACS).

The tables in this report are based on the District Boundaries for the 104th Legislature that were approved by the Legislature in 2011 and were based on the data from the 2010 Census. Because of changes in Legislative District boundaries, the tables in this report are not directly comparable to prior reports using the previous boundaries.

On December 4, 2014, the U.S. Census Bureau released five-year ACS estimates for the combined years of 2009 through 2013, making available social, economic, housing and demographic statistics for every county and community in Nebraska and the nation. Also available are estimates for Nebraska's Legislative Districts, which are used in this report. The ACS is an ongoing, nation-wide survey conducted every month. Each year approximately 1 in 40 persons are sampled. During the past 5 years in Nebraska, there has been an average of about 40,000 persons interviewed per year.

While this annual number of interviews is adequate for state-level summaries, for smaller levels of geography like legislative districts and most Nebraska counties, only 5-year data are available for analysis. The 5-year estimates are period estimates. The data are based on a rolling national sample survey mailed monthly from 2009 through 2013. By pooling several years of survey responses, the ACS can generate detailed statistical portraits of smaller geographies that represent the characteristics of the population over the specific data collection period. The Census Bureau issues new sets of these five-year estimates every year, permitting users to track trends in even the smallest of areas over time. This is the second set of five-year estimates available using the 2011 boundaries.

The new 2009-2013 ACS estimates are not related to the 2010 Census population counts that have been released. The ACS complements the decennial count and provides estimates of population characteristics that are far more detailed than the basic demographic information that has been released from the 2010 Census.

Because it is a survey based on a sample of the population rather than the entire population, the ACS produces estimates, not actual counts. Since it is based on a sample, the ACS also is subject to sampling error. To aid data users, the Census Bureau calculates and publishes a margin of error for every ACS estimate it produces.

On the following page are definitions of some of the terms used in this report.

Definitions

Individuals for Whom Poverty Status is Determined – Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups were excluded from the numerator and denominator when calculating poverty rates. Thus, the total population in poverty

Unrelated individual - Person, sharing a housing unit, who is not related to the householder by birth, marriage or adoption. Includes foster children.

Foster children - Children placed in care by a government agency. The child may be related to their foster parents, or unrelated to them. When a foster child is also a relative, such as a nephew or niece, the tables--the poverty universe--is slightly smaller than the overall population.

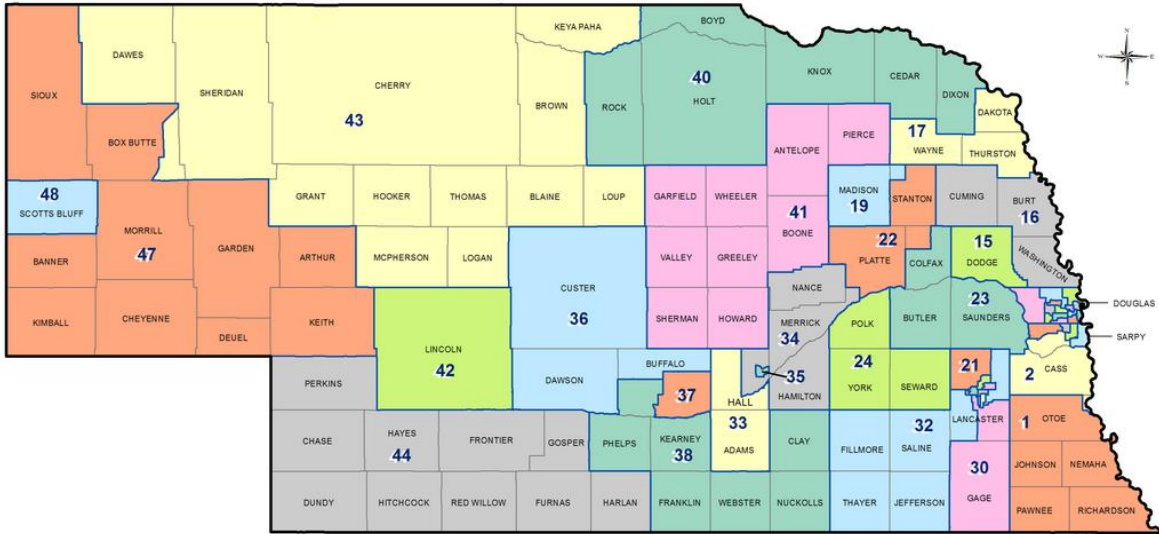

Specified Poverty Levels – To determine a person's poverty status, one compares the person's total family income in the last 12 months with the poverty threshold appropriate for that person's family size and composition. If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered "below the poverty level," together with every member of his or her family. If a person is not living with anyone related by birth, marriage, or adoption, then the person's own income is compared with his or her poverty threshold. The total number of people below the poverty level is the sum of people in families and the number of unrelated individuals with incomes in the last 12 months below the poverty threshold.

Ratio of Income to Poverty – People and families are classified as being in poverty if their income is less than their poverty threshold. If their income is less than half their poverty threshold, they are below 50% of poverty; less than the threshold itself, they are in poverty (below 100% of poverty); less than 1.25 times the threshold, below 125% of poverty, and so on. As the ratio of income to poverty becomes greater, there will be more people who fall under the category, because higher ratios include more people with higher incomes.

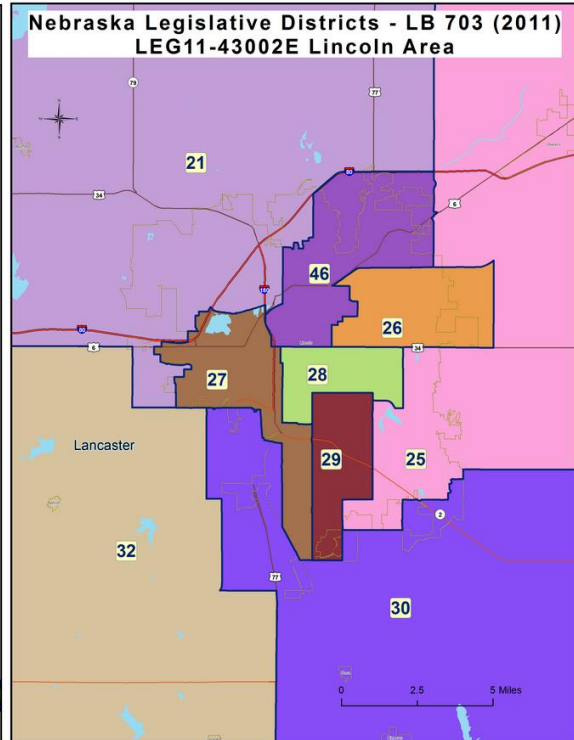

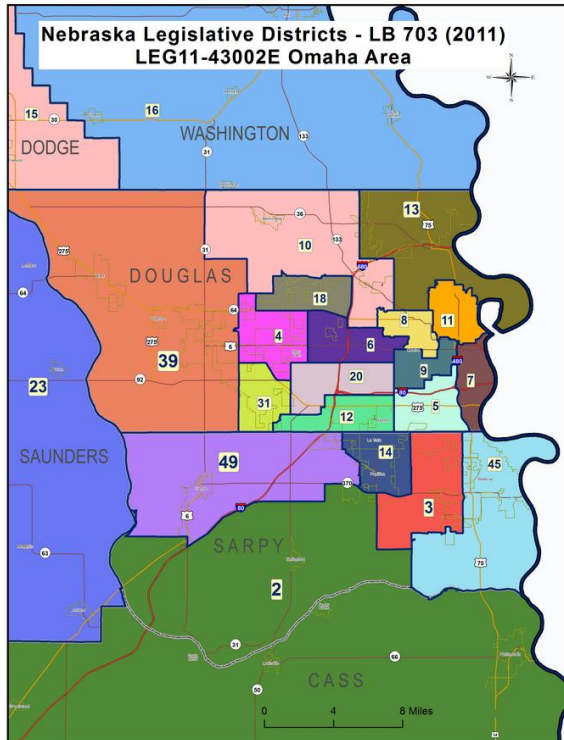

District Boundaries for the 103rd Legislature (2011)

Nebraska Legislative Districts - LB 703 (2011)

(Districts took effect May 27, 2011)
