CO-ORDINATION OF EFFORTS

Economic maximization is a part and parcel of economic planning and that the Government announced on Monday the formation of a Committee to monitor economic activities would help in the future prevention of a production crisis and economic overloading.

Now that the committees which have been announced are mostly concerned with national security and the implementation of various projects, there will be a need for the co-ordination of the point of view of all the economic forces in the country.

For constructing the laws of economic activities, the line of action to be taken for an economic plan, and the production of goods for the country, it is essential to take into consideration the economic forces and the production of goods for the country.

In the absence of coordination, the economic forces and the production of goods for the country will not work together and the production of goods for the country will not be able to meet the demands of the country.
