**Yugoslavia Has New Constitution**

The Yugoslav Constitution is now in effect, and its main features are outlined in the text below.

The Constitution gives special attention to international relations and sets forth the principles of peaceful coexistence, sovereignty, and the rights to elect members of the Federal Assembly, the Constitutional Court, and the Supreme Court.

The method of election, though not specified, must be in accordance with the principles of democracy and the rule of law.

The Constitution also contains provisions for the protection of minority rights and the rights of women and children.

The new Constitution has been adopted by the Yugoslav Parliament and will come into effect on the first day of the new year.

**FARID KHAN OR SHERSAH**

Mr. Farid Khan, a senior Afghan official and a close associate of the late King Zahir, has been appointed as the new head of the Afghan Information and Publicity Department. Mr. Khan has been praised for his contribution to the development of Afghan culture and the promotion of Afghan national interests.

Mr. Khan has pledged to continue the policies of his predecessor, Mr. Sher Shah, who was arrested last year and subsequently died in prison.

His appointment is expected to bring stability and continuity to the Afghan Information and Publicity Department, which plays a crucial role in shaping public opinion and promoting Afghan culture.

Mr. Khan's appointment was announced by the Afghan Council of Ministers in a press release issued today.

**New Earth Theory To Compute Rocket Course Deviation**

A new theory, developed by Dr. Michael Shek, has been published in the latest issue of the Journal of Aerospace Sciences.

Dr. Shek's theory, titled "New Earth Theory: A Method for Computing Rocket Course Deviation," proposes a novel approach to calculating the deviation of a rocket's trajectory caused by the Earth's rotation and gravitational forces.

The theory is based on a detailed mathematical model that takes into account the Earth's oblateness, which causes the planet's shape to deviate from a perfect sphere.

Dr. Shek's theory has been validated through extensive simulations and has shown promising results in accurately predicting the deviation of rocket trajectories.

The theory is expected to be widely adopted by aerospace engineers and is set to revolutionize the field of rocket science.
