U Thant Fears Renewal Of Fighting In Cyprus Would Harm U.N. Reputation

BY JAMES M. McPHERSON

U Thant, United Nations Secretary-General, expressed concern that a renewal of fighting in Cyprus could threaten the U.N.'s reputation.

U Thant said that the U.N. had a crucial role in maintaining stability in Cyprus and that any resurgence of violence could undermine its credibility. He urged all parties to avoid further incidents and to work towards a peaceful resolution.

U Thant's statement came as tension increased between Greek and Turkish Cypriots, with recent incidents leading to concerns about a return to conflict.

He emphasized the importance of international intervention in the island's affairs and called for a united approach from the U.N. and other international bodies.

Pakistani President Zia-Ul-Haq, who visited Cyprus earlier in the year, expressed support for the U.N.'s efforts and called for a resumption of talks to find a lasting solution.

Recovering Human Beings:

PROSPECTS FOR TRANSPLANTATION OF ART ORGANS IN SIGHT

BY R. S. MILLER

In the not-so-distant future, it may be possible to replace damaged or diseased organs with healthy ones from a donor. This has been suggested by the success of human organ transplantation.

The prospects for organ transplantation are promising, with improvements in surgical techniques and immunosuppressive drugs. Organs from compatible donors could be transplanted into patients, providing a potential cure for a range of conditions.

Japanese researchers have given support to the idea of human organ transplantation, citing the importance of considering the ethical implications before proceeding. The concept of a transplant bank could be introduced, where organs from deceased donors could be stored and matched to suitable recipients.

The Japanese government has been cautious in its approach, with concerns raised about the allocation of organs and the potential for organ trafficking. However, the benefits of transplantation could provide a significant improvement in the quality of life for many people.

Japanese athletes have also been the subject of organ donation, with a number of cases reported in the media. These cases provide hope for the potential of organ transplantation in Japan.

The seventeen-nation Conference of Independent States met in Tehran yesterday to discuss the issue of organ donation. Representatives from various countries were present, including Pakistan, China, and Japan.

The conference aimed to promote greater cooperation in the field of organ transplantation and to address the ethical and legal challenges that arise in this area.

U Thant, who attended the conference, stated his support for the efforts of the Conference of Independent States and called for a collaborative approach to organ donation.

On the domestic front, a Pakistani organ donor, Dr. A. H. Khan, was awarded a gold medal for his significant contributions to the field of organ transplantation.

Dr. Khan, a cardiovascular surgeon, has been instrumental in promoting organ donation in Pakistan. His efforts have been recognized by the government, with the gold medal awarded to him in appreciation of his work.

Dr. Khan's dedication to organ donation has inspired many others in the country, and his efforts continue to be highlighted in the media. The award serves as a reminder of the importance of organ donation and the need for greater awareness in Pakistan.
RUSSIAN-ECONOMIC AGREEMENT CONCLUDED

600 Graduates From Kabul Primary Girls Schools

The Sixth Five-Year Plan for Afghan development is to get underway in April in the capital city, Kabul. It is expected that the plan will be completed by 1980. Under the plan, the government of Afghanistan has decided to increase the number of primary schools in the country. It is hoped that this will improve the educational system and provide more opportunities for Afghan children.

RELAY 2 SATELLITE LAUNCHED

A relay satellite, which will be used for multi-contact operations, was launched from the United States. The satellite is expected to be used for communications and other purposes, and will be placed in geosynchronous orbit. The satellite is expected to be operational by the end of the year.
