

Steps to Download a Shapefile from www.census.gov

This demo is for the shapefile .zip folder for 2010 census tracts in Lancaster county, Nebraska.

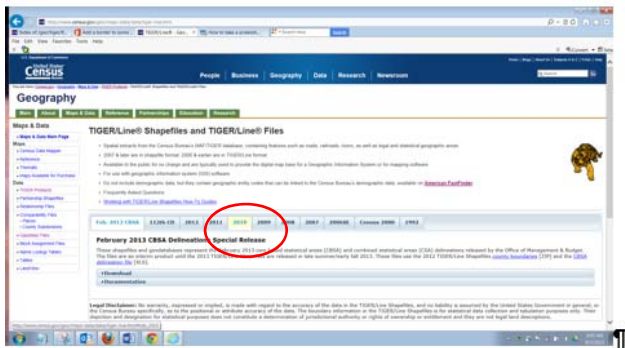

From the homepage, select Geography from the main menu.

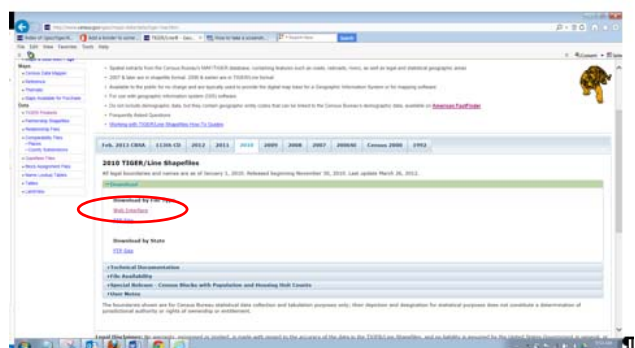

Select the product you want. Most likely this will be the TIGER Line/Shapefiles.

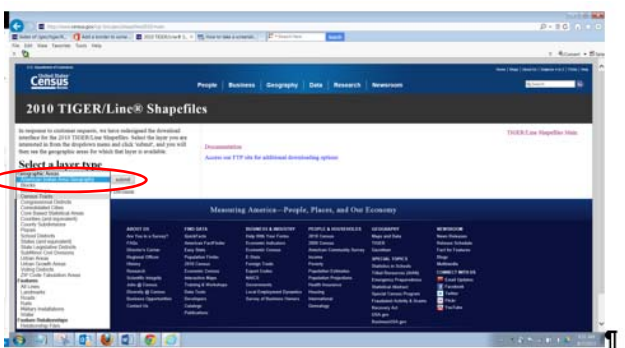

Select the year by clicking the corresponding tab.

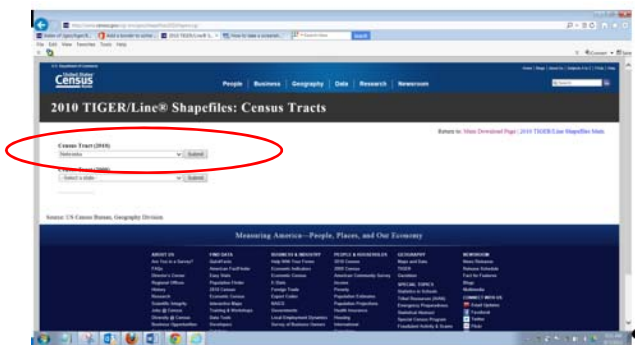

Select Web Interface.

Select the layer type. Click Submit.

Select additional information as the menu boxes come up and click Submit. In this case, since we selected census tracts as our layer type, the next screen asks what year and state.

The next screen asks which county. Your select screens might be different depending on what geography you are looking for.

The final screen will ask whether you want to open or save. It is usually a good idea to save the .zip folder so you can extract the files later.
